

Dunlop Products

MXR, Jimi Hendricks, Way Huge & Many More

Please Read All of This Before Ordering

Preface & Introduction: If you have an interest in Dunlop products, I can provide any product that the Company manufactures or distributes. I've not included all of the several hundred they do produce, because most only appeal to regular guitar players. What follows though, are those of particular interest to steel guitarists. I list their Internet link where pictures, descriptions and their sound-demonstrations are often provided. I do ask the following of you:

Please Don't Order to Just Experiment and then return: I expect you to know the sound of each before you make a purchase. Do review the links provided for each product or ask for recommendations from other steel players on the Steel Guitar Forum ([Index : The Steel Guitar Forum](#)). If you must experiment, please do so with others who own the items or at retail music outlets that permit it. Why? I want you to **know what you're getting when you order!** Getting one of these pedals to experiment with requires you to cover the shipping costs to get it back to me for a refund. It then becomes a used item, which must be revealed if I later sell it. This puts me in conflict with the manufacturer's MAP pricing. So do read on about it.

What is "MAP" Pricing? It is what manufacturers **require:** "**M**inimum **A**sking **P**rice." No retailer is allowed to sell below the **MAP** price. But all of my prices include domestic shipping and taxes, which I absorb. You're not done; keep reading!

The Dunlop Company has many other products, but they primarily fill the needs of regular guitarists, not steel guitarists. All of their products can be accessed at [DUNLOP SINCE 1965. \(jimdunlop.com\)](#). I also carry their strings and tone bars which are listed elsewhere on this website's list of my products. Their MXR division manufactures my Resonators for me. I took the liberty of **increasing** all their product prices by one penny! I just hate prices that always end in 99 cents!

Product Descriptions and Sound Demonstrations (if available!): For the manufacturer's description and demonstration, place your mouse's cursor over the internet link address in the far-right columns below. Immediately, a second address will pop up right above the link. At that point (and with your left hand), press the "CTRL" key on your keyboard (it is in the bottom row of keys and at the far left!). While holding down the CTRL (Control) key, left click your mouse cursor. The picture of the unit will immediately appear and you can view and read the complete page. While there, do scroll down the page to the line below the product's picture. There you will see the product's description, titled "The Long Story," followed by "**Product Demo**" (but only if a sound demo has been created for it). If a demonstration is provided, click on it to view the video and listen to how that unit alters your guitar's sound. If a demo is not available on the Dunlop website, you can usually Google the products name (i.e. Dunlop Rockman Headphones) and find a website where a demonstration is provided (most often on YouTube). But always ask for advice from fellow steel guitarists on the SG Forum before ordering from me.

Thanks for Reading All of This. ...Tom
